

Protect Customer Data. Reduce Credit Card Theft. Effortless Inspection Process. Peace of Mind.

The risk of compromises to customer data is at an all time high. Organized crime has clearly set its sights on the vulnerability in the retail payments process and has targeted credit card terminals and PIN pad devices as easy sources to obtain valuable consumer data. Evidence of tampering and security breaches to marquee retailers across the country are mounting weekly. Recently one retailer has estimated the cost of their security breach will exceed \$10 million dollars.

However, retailers can proactively take steps now to minimize their risk of exposure and meet Payment Association Best Practices (PAPB) for safeguarding consumer data. VeriFone's Secure Terminal Audit service is designed to help retailers deter the criminal element by running either scheduled or random

inspections on their credit card terminals and PIN pad devices.

VeriFone works with each customer to develop unique program parameters that address each organization's specific requirements and needs. Our professionals work closely with you to develop an inventory list of terminals by their unique serial numbers. Then, we work with your security team to design a program that meets your specific needs and includes picking up terminals and shipping them directly to our facility for analysis. We evaluate every terminal and when completed, clean and test the product before it is returned into your inventory. A report will be attached with every tested product to ensure each terminal is completely safe and tamper-free. Our audit tracking system will keep track of your complete inventory tested and

help deter tampering at your retail locations.

Protecting consumer data is everyone's responsibility and should be a vital component to your overall operation. VeriFone's Secure Terminal Audit service is a painless way for your operation to meet Payment Association Best Practices today.

FEATURES AT A GLANCE

- Provides proactive terminal inspections for security assurance and peace of mind
- Includes inventory of spare terminals and ensures no system down time
- Performs complete diagnostics check on every terminal
- Cleans and tests all system terminals
- Provides comprehensive summary reports on all audited terminals
- Coupled with locking stands, deters criminals to other avenues

Terminal disposal is as easy as 1-2-3-4!

1

Provide VeriFone with an inventory list.

To insure total control, provide VeriFone with a list of all serial numbers. If that is not possible, VeriFone will enter the device serial numbers as they are received.

2

Stores ship de-installed devices to VeriFone.

Devices can be shipped to VeriFone by whatever method works best, individually by store, or in bulk. Alternatively, VeriFone can have call tags issued for all of your devices.

3

VeriFone properly disposes of devices.

VeriFone will insure all secure data, applications and encryption keys are properly destroyed and the device components are disposed of properly.

4

VeriFone provides a complete audit trail.

When the process is complete, VeriFone will send you a complete audit trail of all secure devices that were properly retired.

VeriFone has all of the services you need.
